Subject: hurting in Denmark

I'm just a little user that is STILL hurt every single day in Denmark because of Microsoft's aggressive and illegal practices since 1987..

for example:

- in 1994 i bought OS/2 Warp version 3 and was one click to the internet a year before MS got there (with the release of Win95)..

- that version 4 (which was cheaper than Win95 or 98) remains stable, usable and just fine for almost everything i need, EXCEPT when i try to go to almost ANY web site inside Denmark with my Netscape Explorer browser.....it just will NOT work with (for example) my bank <<http://www.nykredit.dk/bank/>>

the bank has a full service, on-line facility written entirely for MS Internet Explorer ONLY....I asked about that problem to my friendly bank man and the OFFICIAL company policy is: 99% of our customers use Internet Explorer and we will NOT support any other..

how did it get that way? MS sold "Front Page" at give away prices...an HTML authoring software pack deliberately crafted to produce web sites which will not work with Netscape AS SHIPPED..

find a Dane in the D.C. area and ask them to check out Denmark's web sites with ANY non-Microsoft browser except Opera (which was designed from the ground up to TRY to keep up with MS's constantly changing tricks)..
